WordPress Integration

I. Step-by-step setup

Follow these steps to install the module.

➢ **Module setup**

1. Login to your backend panel.
2. Navigate to the Modules page using the side menu.
3. Click « Add a new module ».
4. Click « Choose a file » and select `wordpressintegration.zip`.
5. Hit « Upload this module ».
   Note : if PrestaShop returns an error, you can always manually extract `wordpressintegration.zip` *and upload the* `wordpressintegration` *folder to you server in the* `/modules/` *directory.*
6. Once the module has been uploaded, hit the « Install » button next to it.

Your module is now installed. By default, the module only shows the title and description of each post, this is due to a WordPress limitation. In order to add support for displaying images, please follow these instructions:

➢ **Add support for displaying post thumbnails**

The following instructions require that you have access to your WordPress's installation folder.

1. Locate your theme's `functions.php` file and open it. If you are running the default WordPress theme, it should be about here :
   `/wp-content/themes/twentyseventeen/functions.php`

2. Copy and paste the following code at the very end of the file :

```
function add_rss_thumbnail() {
   global $post;
   if(has_post_thumbnail($post->ID))
   {
        $thumbnail = get_the_post_thumbnail_url($post->ID);
        echo("<image>{$thumbnail}</image>");
   }
}
add_action('rss2_item', 'add_rss_thumbnail');
```

That's it! You've just enabled post images in your WordPress RSS feed, which is used for retrieving the posts on your shop.

II. How to use the module

By default, the module will be attached to the displayHome() hook on PrestaShop, which means it will be displayed on your shop's homepage. If you wish to show your blog articles on another page, we have created a hook just for that: the displayWordpressIntegration() hook.

Should you need to use this hook, you will have to open the PrestaShop template file in which you wish to put the blog articles, and paste the following code wherever you want these blog posts to appear: `{hook h='displayWordpressIntegration'}`

That's it ! Now clean your cache and refresh the page to see the restult.
